## Based on

Maven is based on developing  
Java based software

Gradle is based on developing  
domain-specific language  
projects

# Maven vs. Gradle

## Focus

# Maven vs. Gradle

## Customization

Maven provides a limited number of parameters and is not much customizable

Gradle is highly customizable, providing a large range of IDE support builds

# Maven vs. Gradle

## Performance

Maven does not build cache,  
that makes the build time  
slower

Gradle performs better than  
Maven as it tracks only the  
current task

**How to Choose?**

# How to choose?

- The tools have their own respective pros and cons
